ALEWIFE MONITORING TRAINING

Alewife (Alosa pseudoharengus)

Please join us and learn how to monitor alewives for the
2018 spawning survey

MONDAY, March 12th
6:00pm – 7:00pm

Save the Sound office
545 Tompkins Ave, 3rd Floor
Mamaroneck, NY 10543

Volunteers are needed to watch for spawning alewife. Alewife are a species of river herring native to Westchester County. Like salmon, they split their life cycle between salt and freshwater. Most Westchester tributaries once supported spring runs of returning alewife. Unfortunately, alewife runs have been decimated by dams, habitat loss and declining water quality. While remnant populations exist in a few rivers, little is known about their overall status in our area. Documenting existing spawning runs is an important step in the restoration effort.

KINDLY RSVP TO:
